

## 9074 Gas Engineering update February 2019

### 9074-03 Level 3 Diploma in Gas Engineering (On Programme)

In April 2019 we are introducing a unit route for the Level 3 Diploma in Gas Engineering. This will be available for registrations under 9074-93 on the walled garden.

### 9074-12 Gas Engineering End-point Assessment

Learners that are coming to an end of this on programme qualification will also be able to sit the end point assessment from June 2019 onwards. (See below for full details). To do this, you also need approval to offer the end point assessment (9074-12). Details of this can be found in the 'Manual for our EPA service' on the website at the link below:

<https://www.cityandguilds.com/apprenticeships/endpoint-assessment-service/document-library>

In 2018 we were approved to offer the Gas Engineering standard and appear on the register of end-point assessment organisations. You can view the [list of standards](#) (CSV, 45.4KB) here.

As a result, we have been working to get the EPA for Gas Engineering up and running for when learners will be ready to sit this. The EPA consists of several components including:

- 1 Portfolio assessment:
  - Gas Safe Registration
  - Competency Test
  - Work Log Review
- 2 Knowledge assessment (e-volve multiple choice test)

Based on centre feedback we have revised the timetable below for centres who plan to offer the EPA this summer. Below indicates when each component will be available.

- Registrations - these are **open** on the Walled garden for the 9074-12 Gas Engineering EPA. Please note that whilst registrations are open, the first booking date for this EPA isn't until June 2019 and centres cannot book evolve tests until then.

- EPA packs and information for centres – This will be available on the website by 01 March 2019.
- First reservation window – **01 June 2019**
- First assessment window – **01 June 2019** (including evolve tests)

For more information about booking windows and dates, please refer to the catalogue page for dates. These are all visible on the walled garden.

Pricing for the individual components are also available on the walled garden.
