Who is this document for?

This document has been produced for centres who offer City & Guilds Level 3 Technicals in Constructing the Built Environment. It gives all of the essential details of the qualification’s external assessment (exam) arrangements and has been produced to support the preparation of candidates to take the exam/s.

The document comprises four sections:

1. **Details of the exam.** This section gives details of the structure, length and timing of the exam.
2. **Content assessed by the exam.** This section gives a summary of the content that will be covered in each exam and information of how marks are allocated to the content.
3. **Guidance.** This section gives guidance on the language of the exam, the types of questions included and examples of these, and links to further resources to support teaching and exam preparation.
4. **Further information.** This section lists other sources of information about this qualification and City & Guilds Technical Qualifications.
1. Details of the exam

External assessment
City & Guilds Technical qualifications have been developed to meet national policy changes designed to raise the rigour and robustness of vocational qualifications. These changes are being made to ensure our qualifications can meet the needs of employers and Higher Education. One of these changes is for the qualifications to have an increased emphasis on external assessment. This is why you will see an external exam in each of our Technical qualifications.

An external assessment is an assessment that is set and/or marked by the awarding organisation (ie externally). All City and Guilds Technical qualifications include an externally set and marked exam. This must be taken at the same time by all candidates who are registered on a particular qualification. We produce an exam timetable each year. This specifies the date and time of the exam so you can plan your delivery, revision and room bookings/PC allocation in plenty of time.

The purpose of this exam is to provide assurance that all candidates achieving the qualification have gained sufficient knowledge and understanding from their programme of study and that they can independently recall and draw their knowledge and understanding together in an integrated way. Whilst this may not be new to you, it is essential that your learners are well prepared and that they have time to revise, reflect and prepare for these exams. We have produced a Teaching, Learning, and Assessment guide that is you should refer to alongside the present document (Teaching, Learning and Assessment Guide). If a learner does not pass the exam at their first attempt, there is only one opportunity to resit the exam, so preparation is essential.

Exam requirements of this qualification

- Constructing the Built Environment – Theory exam (3 hours).

The exam is graded and a candidate must achieve at least a Pass grade in order to be awarded the qualification. (In addition to the exam, a synoptic assignment must also be completed and passed). You can find full details of the synoptic assignment in the Qualification Handbook and the Synoptic Assessment Guide – please see the link to the qualification page at the end of this document.

When does the exam take place?
The exam is offered on two fixed dates in March or June. The exact dates will be published at the start of the academic year in the Assessments and Exam Timetable http://www.cityandguilds.com/delivering-our-qualifications/exams-and-admin.

At the start of the programme of study, in order to effectively plan teaching and exam preparation, centres should know when the exam will be taking place and allocate teaching time accordingly. Section 2 of this document gives a summary of the content that needs to be covered in order to prepare learners for the exam and full details of this are given in the Qualification Handbook.
Form of exam
The exam for this qualification can be taken either on paper (6720-544) or online (6720-044).

Can candidates resit the exam?
Candidates who have failed an exam or wish to retake it in an attempt to improve their grade, can do so twice. The third and final retake opportunity applies to Level 3 only. The best result will count towards the final qualification. If the candidate fails the exam three times then they will fail the qualification.

How the exam is structured
Each exam has a total of 90 marks and is made up of:
- approximately 20-24 short answer questions
- 1 extended response question.

Multiple choice and short answer questions are used to confirm breadth of knowledge and understanding.

The extended response question is to allow candidates to demonstrate higher level and integrated understanding through written discussion, analysis and evaluation. This question also ensures the exam can differentiate between those learners who are ‘just able’ and those who are higher achieving.

More details about and examples of question types are given in Section 3 of this document.

Assessment Objectives
The exams are based on the following set of assessment objectives (AOs). These are designed to allow the candidate’s responses to be assessed across the following three categories of performance:
- Recollection of knowledge.
- Understanding of concepts, theories and processes.
- Integrated application of knowledge and understanding.

In full, the assessment objectives covered by the exam for this qualification are:

<table>
<thead>
<tr>
<th>Assessment objective</th>
<th>The candidate..</th>
<th>Mark allocation (approx %)</th>
</tr>
</thead>
<tbody>
<tr>
<td>AO1 Recalls knowledge from across the breadth of the qualification</td>
<td></td>
<td>34%</td>
</tr>
<tr>
<td>AO2 Demonstrates understanding of concepts, theories and processes from a range of learning outcomes.</td>
<td></td>
<td>46%</td>
</tr>
<tr>
<td>AO4 Applies knowledge, understanding and skills from across the breadth of the qualification in an integrated and holistic way to achieve specified purposes.</td>
<td></td>
<td>20%</td>
</tr>
</tbody>
</table>
Booking and taking the exam
All assessments for City & Guilds Technical Exams must be booked through Walled Garden. There is a deadline for booking exams, synoptic assessments and any other centre marked assessments, please refer to the time line to check these dates.
The exam must be taken under the supervision of an invigilator who is responsible for ensuring that it is conducted under controlled conditions. Full details of the conditions under which the exam must be taken can be found in the Joint Council for Qualifications (JCo) document, Instructions for Conducting Examinations (ICE).

Special consideration
Candidates who are unable to sit the exam owing to temporary injury, illness or other indisposition at the scheduled time may qualify for special consideration. This is a post-examination adjustment that can, in certain circumstances, be made to a candidate’s final grade. The Joint Council for Qualifications’ guide to the special consideration process can be found at www.jcq.org.uk.
To make a request for special consideration, please contact: policy@cityandguilds.com

Access arrangements
Access arrangements are arrangements that allow candidates with particular requirements, disabilities or temporary illness to take assessments, where appropriate, using their normal way of working. The Joint Council for Qualifications document, Access Arrangements and Reasonable Adjustments gives full details and can be downloaded here.
For further information and to apply for access arrangements please see: Access arrangements - When and how applications need to be made to City & Guilds Applying for access arrangements on the Walled Garden
2. Content assessed by the exam

The exam assesses:

- **Unit 301: Domestic construction technology**
- **Unit 302: Industrial and commercial construction technology**
- **Unit 303: Health and safety in the Built Environment**
- **Unit 312: Architectural design and planning**

Each exam assesses a sample of the content of these units. This means that a single exam will **not** cover 100% of the unit content. The full range of content will be assessed over a number of examination series. Details of the coverage of a particular exam paper will **not** be released in advance of the exam itself. Centres should **not** make assumptions about what will be assessed by a particular exam based on what has been covered on previous occasions. In order to be fully prepared for the exam, learners **must** be ready to answer questions on **any** of the content outlined below.

The table below provides an overview of how the qualification’s Learning Outcomes are covered by each exam and the number of **marks** available per Learning Outcome (ie **not** the number of **questions** per Learning Outcome). In preparing candidates for the exam, we recommend that centres take note of the number of marks allocated to Learning Outcomes and to assign teaching and preparation time accordingly.

In preparing candidates for the exam, centres should refer to the Qualification Handbook which gives full details of each Learning Outcome. The following is a summary of only that qualification content which is assessed by the exam and **not** a summary of the full content of the qualification.

<table>
<thead>
<tr>
<th>Unit</th>

| | Total marks for sections: 72 marks |
| | Integration across units*: 18 marks |
| | Total marks for exam: 90 Marks |

* Integration across units. These marks relate to Assessment Objective 4. These marks are awarded to differentiate between levels of performance by candidates taking the exam. The marks are given for how well a candidate has applied their knowledge, understanding and skills from across the units that make up the qualification in an integrated way to meet the requirements of the exam questions.
### Vocabulary of the exam: use of 'command' verbs

The exam questions are written using 'command' verbs. These are used to communicate to the candidate the type of answer required. Candidates should be familiarised with these as part of their exam preparation.

The following guidance has been produced on the main command verbs used in City & Guilds Technicals exams.

A more detailed version of this table, which also includes the command verbs used in the assignments is published in *City & Guilds Technical Qualifications Teaching, Learning and Assessment guide*.

<table>
<thead>
<tr>
<th>Command verb</th>
<th>Explanation and guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Analyse</td>
<td>Study or examine a complex issue, subject, event, etc in detail to explain and interpret, elements, causes, characteristics etc</td>
</tr>
<tr>
<td>Calculate</td>
<td>Work out the answer to a problem using mathematical operations</td>
</tr>
<tr>
<td>Compare (...and contrast)</td>
<td>Consider and describe the similarities (and differences) between two or more features, systems, ideas, etc</td>
</tr>
<tr>
<td>(or describe the similarities/differences)</td>
<td></td>
</tr>
<tr>
<td>Define</td>
<td>Give the meaning of, technical vocabulary, terms, etc.</td>
</tr>
<tr>
<td>Describe</td>
<td>Give a detailed written account of a system, feature, etc (..the effect of...on...) the impact, change that has resulted from a cause, event, etc (..the process..) give the steps, stages, etc</td>
</tr>
<tr>
<td>Differentiate between</td>
<td>Establish and relate the characteristic differences between two or more things, concepts, etc</td>
</tr>
<tr>
<td>Discuss</td>
<td>Talk/write about a topic in detail, considering the different issues, ideas, opinions related to it</td>
</tr>
<tr>
<td>Distinguish between</td>
<td>Recognise and describe the characteristic differences between two things, or make one thing seem different from another</td>
</tr>
<tr>
<td>Evaluate</td>
<td>Analyse and describe the success, quality, benefits, value, etc (of an end product, outcome, etc )</td>
</tr>
<tr>
<td>Explain</td>
<td>Make (a situation, idea, process, etc) clear or easier to understand by giving details (..how..) Give the stages or steps, etc in a process, including relationships, connections, etc between these and causes and effects.</td>
</tr>
<tr>
<td><strong>Give example(s) / illustrate/</strong></td>
<td>Use examples or images to support, clarify or demonstrate, an explanation, argument, theory, etc</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>--------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Give a rationale</strong></td>
<td>Provide a reason/reasons/basis for actions, decisions, beliefs, etc</td>
</tr>
<tr>
<td><strong>Identify</strong></td>
<td>Recognise a feature, usually from a document, image, etc and state what it is</td>
</tr>
<tr>
<td><strong>Justify</strong></td>
<td>Give reasons for, make a case for, account for, etc decisions, actions, conclusions, etc, in order to demonstrate why they suitable for or correct or meet the particular circumstances, context</td>
</tr>
<tr>
<td><strong>Label</strong></td>
<td>Add names or descriptions, indicating their positions, on an image, drawing, diagram, etc</td>
</tr>
<tr>
<td><strong>List</strong></td>
<td>Give as many answers, examples, etc as the question indicates (candidates are not required to write in full sentences)</td>
</tr>
<tr>
<td><strong>Name</strong></td>
<td>Give the (technical) name of something</td>
</tr>
<tr>
<td><strong>Propose</strong></td>
<td>Present a plan, strategy, etc (for consideration, discussion, acceptance, action, etc).</td>
</tr>
<tr>
<td><strong>Select</strong></td>
<td>Choose the best, most suitable, etc, by making careful decisions</td>
</tr>
<tr>
<td><strong>State</strong></td>
<td>Give the answer, clearly and definitely</td>
</tr>
<tr>
<td><strong>Summarise</strong></td>
<td>Give a brief statement of the main points (of something)</td>
</tr>
</tbody>
</table>
**Question types**

The following explains, and gives examples of, types of questions used in City & Guilds Technical exams. In preparing candidates to take the exam, it is recommended that you familiarise them with the requirements of each question type so that they can be effective and make best use of the time available when sitting the exam.

- An effective candidate will gauge the type and length of response required from the question and the number of marks available (which is given for each question on the exam paper).
- Short answer questions may not require candidates to write in complete sentences. Extended response questions will require a more developed response.
- Candidates should read the exam paper before attempting to answer the questions and should allocate time proportionate to the number of marks available for each question or section.

<table>
<thead>
<tr>
<th>Question type:</th>
<th>Example question</th>
<th>Mark scheme:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Short answer questions (restricted response)</td>
<td>Compare how risk assessments and method statements are used in construction projects. (5 marks)</td>
<td>Marks as shown up to a maximum of five marks.</td>
</tr>
<tr>
<td>Structured Response Questions</td>
<td>a) Identify two types of hazardous substance referred to in the Control of Substances Hazardous to Health (COSHH) Regulations. (2 marks)</td>
<td>a) Any two of the following at one mark each.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Chemicals or products containing chemicals. • Fumes.</td>
</tr>
</tbody>
</table>
which move the candidate through the topic in a structured way. For example, the question will usually start with a 'recall'/state'/
'describe' question followed by an 'explain' to draw out understanding of the topic. They usually have a shared introductory 'stem', and the number of marks may increase through the question.

b) Explain why asbestos is not included in the COSHH Regulations, despite being hazardous. 
(2 marks)

Extended response questions

Extended response questions are those that require the candidate to write a longer written response using sentences and paragraphs. These usually require candidates to discuss, explain, etc. a topic in some detail. The question is often based on a short case study, scenario or other prompt. The level of detail should be gauged from the question and the number of marks available.

Example question

A couple is seeking to construct a bedroom and bathroom, above an existing attached garage. They require access to these rooms from the first floor landing. The garage has direct access to the house and to the rear garden.

Discuss the works required to complete the project. 

(12 marks)

Mark scheme

Superstructure of buildings, components and materials, conversion and refurbishment, building services, health and safety practices, sustainable design, access, thermal properties, factors affecting design choices, construction techniques to be used.
**Band 1 (0 – 4 marks)**
The candidate identifies a limited number of relevant works to be undertaken, which includes construction and building services and correctly identifies a limited range of the advantages and disadvantages of the proposed work.

**Example band 1 response**
We will need new walls and windows, an extension to the roof and running of the existing services into the new rooms. Remove the existing garage roof and build the external walls to the required height, then extend the roof. Insulate between the trussed rafters in order to reduce heat loss from the new rooms. Construct a wall to separate the bedroom from the bathroom. A lightweight dry-lined partition would be suitable in terms of cost and ease of construction. Electricity will be required for both rooms. Both rooms will require radiators and the existing heating system must be extended into the converted spaces. The bathroom will require both hot and cold water supplies and connection to the existing drainage system. There should be risk assessments in place, especially for working at height. The correct PPE should be used at all times.

**Band 2 (5 – 8 marks)**
The candidate identifies and describes an extensive range of the construction and building services works to be done and explains the competing advantages and disadvantages in broad detail.

**Example band 2 response**
We will need new walls and windows, an extension to the roof, access between the existing part of the house and the new rooms, and extension of the existing services into the new rooms. Firstly, remove the existing garage roof and strengthen the existing ceiling joists to create floor joists for the rooms to be constructed above. Secondly, construct the external walls. Thirdly, open up the existing roof and extend the roof to over the newly constructed spaces using trussed rafters to reduce the build time. Insulate between the trussed rafters in order to reduce heat loss from the new rooms and improve energy efficiency. Construct an internal wall to separate the bedroom from the bathroom. A lightweight dry-lined partition would be suitable as it reduces the load and is quick and easy to construct. Electricity will be required for both rooms for lighting and power. Both the bedroom and the new en-suite will require heating and the existing heating system must be extended into the converted spaces. The bathroom will require both hot and cold water supplies and connection to the existing drainage system. Both rooms will require ventilation, mainly in order to remove water vapour. A gas supply will not be needed. There should be risk assessments in place, especially for the opening up of the existing roof, working at height and using hazardous materials. The correct PPE should be used but, on the whole the health and safety risks will be easy to control if correct practice is used.

**Band 3 (9 – 12 marks)**
The candidate describes a comprehensive range of the construction and building services works to be done and critically compares the advantages and disadvantages associated with the proposed changes.
Example band 3 response

The works will require two extra rooms above the attached garage and on the side of the existing house. This will require new walls (with external windows), an extension to the existing roof, internal fittings and fixtures, access between the existing part of the house and the new rooms, and extension of the existing services into the new rooms. There are several ways in which this could be done.

Firstly, check the existing garage walls and foundations to determine whether they are adequate for the task of supporting the extra load. If they are not, then both may need replacement or enhancement. Secondly, remove the existing garage roof and any insulation and strengthen the existing ceiling joists to create floor joists for the rooms to be constructed above. This will help increase the load-bearing properties of the joists. Thirdly, construct the external walls in a similar material to the rest of the house (matching bricks for example) for aesthetic purposes. Next, open up the existing roof at the relevant side and extend the (assumed pitched) roof to over the newly constructed spaces using trussed rafters to reduce the build time. Insulate between the trussed rafters in order to reduce heat loss from the new rooms, improve energy efficiency and address sustainability issues. Construct an internal wall to separate the bedroom from the bathroom. A lightweight dry-lined partition would be suitable as it reduces the load and is quick and easy to construct. What was once an external wall is now an internal wall and this will need a high quality finish. Dry-lining to match the new wall between bathroom and bedroom would look good and be relatively quick and cheap. Create a new door opening from the bedroom to the first-floor landing of the existing house. If there is a window in the existing wall then place the door there to avoid having to close one opening and open another. Electricity will be required for both rooms but there are to be no sockets in the bathroom and any light switches must be of the rope-pull type. Both the bedroom and the new en-suite will require heating and the existing heating system must be extended into the converted spaces. The bathroom will require both hot and cold water supplies and connection to the existing drainage system. The bedroom should be connected to telecoms systems such as telephone and cable. Both rooms, but especially the bathroom, will require ventilation, mainly in order to remove stale smells and water vapour (to avoid condensation). If the house has a gas supply it might be worth connecting this to a gas water heater for the bathroom, but provision must be made for the flue-gases to escape. There should be risk assessments in place, especially for the opening up of the existing roof, working at height and using hazardous materials. The correct PPE should be used but, on the whole the health and safety risks will be easy to control if correct practice is used.
Examination technique
Candidates with a good understanding of the subject being assessed can often lose marks in exams because they lack experience or confidence in exams or awareness of how to maximise the time available to get the most out of the exam. Here is some suggested guidance for areas that could be covered in advance to help learners improve exam performance.

Before the exam
Although candidates cannot plan the answers they will give in advance, exams for Technical qualifications do follow a common structure and format. In advance of taking the exam, candidates should:

- be familiar with the structure of the exam (i.e. number and type of questions).
- be aware of the amount of time they have in total to complete the exam.
- have a plan, based on the exam start and finish time for how long to spend on each question/section of the exam.
- be aware of how many marks are available for each question, how much they should expect to write for each question and allow most time for those questions which have the most marks available.

At the start of the exam session
At the start of the exam, candidates:

- should carefully read through the instructions before answering any questions.
- may find it helpful, where possible, to mark or highlight key information such as command words and number of marks available on the question paper.
- identify questions which require an extended written answer and those questions where all or part of the question may be answered by giving bullets, lists etc rather than full sentences.

Answering the questions
Candidates do not have to answer exam questions in any particular order. They may find it helpful to consider, for example:

- tackling first those questions which they find easiest. This should help them get into the ‘flow’ of the exam and help confidence by building up marks quickly and at the start of the exam.
- tackling the extended answer question at an early stage of the exam to make sure they spend sufficient time on it and do not run out of time at the end of the exam.

Candidates should avoid wasting time by repeating the question either in full or in part in their answer.

Candidates should **always** attempt every question, even questions where they may be less confident about the answer they are giving. Candidates should be discouraged however, from spending too long on any answer they are less sure about and providing answers that are longer and give more detail than should be necessary in the hope of picking up marks. This may mean they have less time to answer questions that they are better prepared to answer.

Extended answer questions
Before writing out in full their answer to extended questions, candidates may find it helpful to identify the key requirements of the question and jot down a brief plan or outline of how they will
answer it. This will help clarify their thinking and make sure that they don’t get ‘bogged down’ or provide too much detail for one part of the question at the expense of others.
Towards the end of the exam

Candidates should always set aside time at the end of the exam to read back through and review what they have written in order to make sure this is legible, makes sense and answers the question in full.

If a candidate finds they are running out of time to finish an answer towards the end of the exam, they should attempt to complete the answer in abbreviated or note form. Provided the content is clear and relevant, examiners will consider such answers and award marks where merited.

Further guidance on preparing candidates to take the exam is given in the City & Guilds publication, Technical Qualifications, Teaching, Learning and Assessment which can be downloaded free of charge from City & Guilds website.
