

# Systems and Principles Unit Syllabus

## Level 3 Investigating and Defining Customer Requirements for ICT Systems

7540-053

## **About City & Guilds**

City & Guilds is the UK's leading provider of vocational qualifications, offering over 500 awards across a wide range of industries, and progressing from entry level to the highest levels of professional achievement. With over 8500 centres in 100 countries, City & Guilds is recognised by employers worldwide for providing qualifications that offer proof of the skills they need to get the job done.

## **City & Guilds Group**

The City & Guilds Group includes City & Guilds, City & Guilds Institute, ILM (the Institute of leadership & Management) which provides management qualifications, learning materials and membership services, NPTC which offers land-based qualifications and membership services, and HAB (the Hospitality Awarding Body). City & Guilds also manages the Engineering Council Examinations on behalf of the Engineering Council.

## **Equal opportunities**

City & Guilds fully supports the principle of equal opportunities and we are committed to satisfying this principle in all our activities and published material. A copy of our equal opportunities policy statement is available on the City & Guilds website.

## **Copyright**

The content of this document is, unless otherwise indicated, © The City and Guilds of London Institute 2010 and may not be copied, reproduced or distributed without prior written consent.

However, approved City & Guilds centres and candidates studying for City & Guilds qualifications may photocopy this document free of charge and/or include a locked PDF version of it on centre intranets on the following conditions:

- centre staff may copy the material only for the purpose of teaching candidates working towards a City & Guilds qualification, or for internal administration purposes
- candidates may copy the material only for their own use when working towards a City & Guilds qualification

The *Standard Copying Conditions* on the City & Guilds website also apply.

Please note: National Occupational Standards are not © The City and Guilds of London Institute. Please check the conditions upon which they may be copied with the relevant Sector Skills Council.

## **Publications**

City & Guilds publications are available on the City & Guilds website or from our Publications Sales department at the address below or by telephoning +44 (0)20 7294 2850 or faxing +44 (0)20 7294 3387.

Every effort has been made to ensure that the information contained in this publication is true and correct at the time of going to press. However, City & Guilds' products and services are subject to continuous development and improvement and the right is reserved to change products and services from time to time. City & Guilds cannot accept liability for loss or damage arising from the use of information in this publication.

# Unit 053 Investigating and Defining Customer Requirements for ICT Systems

## Syllabus Overview

**Unit accreditation number R/601/3249**

**Credit value 12**

### **Rationale**

This unit covers the principles of investigating existing systems and processes and the application of the techniques used for analysis of information to identify the customer requirements.

### **Learning outcomes**

There are **two** outcomes to this unit. The candidate will be able to:

- 1 Investigate existing systems and processes
- 2 Analyse information to identify needs and constraints

### **Guided learning hours**

It is recommended that **75** guided learning hours should be allocated for this unit. This may be on a full time or part time basis.

### **Connections with other qualifications**

This unit contributes towards the learning outcomes and assessment criteria required for the level 3 Diploma in ICT Professional Competence.

### **Assessment and grading**

Assessment will be by means of a **set assignment** covering practical activities and underpinning knowledge.

## Unit 053

# Investigating and Defining Customer Requirements for ICT Systems

## Outcome 1

Investigate existing systems and processes

### Practical activities

The learner will be able to

- 1 Use three of the following investigative methods:
  - observations
  - examination of existing documents, records or software
  - questionnaires
  - site surveys
- 2 Record the results of investigations using standard documentation
- 3 Explain the importance of preserving the confidentiality of customer information

### Underpinning knowledge

The learner will be able to

- explain the reason for using observation as an analytical tool
- describe the purpose of examining existing documents, records and software
- describe the generally accepted rules of good practice for drawing up questionnaires
- explain the reason for using a site survey as an analytical tool
- explain that security measures must be defined to protect customer information stored in a computer eg backup, passwords
- describe how customer information can be protected in a manual system eg physical locks
- explain the purpose and use of a decision table.

# Unit 053 Investigating and Defining Customer Requirements for ICT Systems

Outcome 2 Analyse information to identify needs and constraints

## Practical activities

The learner will be able to

- 1 Describe the type of defect, including inaccuracy, duplication and omission, which can arise in information
- 2 Describe the types of customer needs and constraints which can affect the design of an ICT system
- 3 Analyse information to identify customer needs for:
  - data to be stored and processed
  - functionality in terms of inputs, processes and outputs
  - capacity including numbers of users, throughput, and data storage
- 4 Analyse information to identify customer constraints
- 5 Record the results of analyses using standard documentation

## Underpinning knowledge

The learner will be able to

- describe the types of constraint that may be imposed on a system: compatibility with existing systems; physical; timescale; regulatory; financial; reliability; performance
- explain that a data dictionary defines for each individual data element
  - unique name
  - data type (numeric, character, date, logical)
  - format (currency, day/month/year)
  - description
  - range/domain
  - size
- explain that a data dictionary defines for each data group its composition eg Aircraft Position = Latitude + Longitude + Height
- state that the diagrammatical representations used may be dependant on the type of system to be developed eg real-time
- describe the use of the following:
  - Data Flow Diagram (DFD)
  - Entity Relationship Diagram (ERD)
  - State Transition Diagram (STD)
  - Object modelling diagram
- explain the importance of presentations/walkthroughs and approval/sign off at each stage of the SDLC to ensure that proposals meet customer requirements

# Unit record sheet

Use this form to track your progress through this unit.

Tick the boxes when you have covered each outcome. When they are all ticked, you are ready to be assessed.

Outcome	✓	Date
1 Investigate existing systems and processes	<input type="checkbox"/>	
2 Analyse information to identify needs and constraints	<input type="checkbox"/>
