- 1 Which one of the following is the correct scripting when using the file extension .sh?
  - a. A Windows batch file.
  - b. A Windows PowerShell file.
  - c. A Linux shell script file.
  - d. A Linux batch script file.
- 2 Which one of the following file extensions indicates a PowerShell script?
  - a. PS1
  - b. PSD
  - c. PSS
  - d. PSH
- 3 Which one of the following **best** describes the use of a shell script in Linux server administration?
  - a. It manages the allocation of memory resources.
  - b. It manages routine tasks and file management.
  - c. It manages the processor job queue and prioritisation.
  - d. It manages the allocation of remote syslog messages.
- 4 Which one of the following **best** describes the use of a PowerShell script in Windows server administration?
  - a. It is used for local task management.
  - b. It is used for remote terminal access.
  - c. It is used for running a syslog.
  - d. It is used for authenticating encryption.
- 5 Which one of the following describes the typical use of a batch script in server administration?
  - a. It is used for remote terminal access.
  - b. It is used for running a syslog.
  - c. It is used for authenticating encryption.
  - d. It is used for file duplication.
- 6 Which one of the following **best** describes the function of a batch file?
  - a. For the completion of routine tasks.
  - b. For remote system administration.
  - c. For the logging of system messages.
  - d. For memory process management.
- 7 Which one of the following is a benefit of coding in a low level language such as Assembler?
  - a. It has backwards hardware compatibility.
  - b. It can be re-used on different technologies.
  - c. It can be easily encrypted by hardware.
  - d. It fits with a specific hardware architecture.
- 8 Which term is specifically associated with code re-use within an object oriented programming language?
  - a. Polymorphism.
  - b. Inheritance.
  - c. Classification.
  - d. Overloading.
- 9 What is the **main** purpose of establishing requirements during the 'application development' phase of application lifecycle management?
  - a. To establish project costs and projected expenditure.
  - b. To establish customer expectations and project scope.
  - c. To establish a specific project development baseline.
  - d. To establish a methodology for the design process.

- 10 Which one of the following correctly describes the purpose of the 'service management' phase of application lifecycle management?
- Developing additional application features post project.
  - Designing v2 of the software after customer feedback.
  - Designating a specialist patch management service.
  - Deploying the software into the customers' environment.
- 11 Why is branching used in coding?
- To make a decision.
  - To repeat a task.
  - To complete a loop.
  - To return a value.
- 12 Which one of the following is an example of an algorithm?
- To patch operating systems.
  - To run batch files.
  - To 'ping' remote networks.
  - To sort data alphabetically.
- 13 Which data structure is required to store numbers from 1 down to 0.0000001?
- Numerical Object.
  - Positive Integer.
  - Floating Point.
  - Complex Array.
- 14 Which data structure is used to store a large sequence of values?
- Array.
  - Integer.
  - Character.
  - Float.
- 15 Which one of the following describes the **main** benefit of using a local web server for web development?
- It ensures less distance between database and site.
  - It offers a faster local connection for large uploads.
  - It ensures a higher level of site development security.
  - It offers a safe sandbox development environment.
- 16 What is the **main** advantage of coding webpages using text files?
- The Unicode standard is more current than ASCII.
  - It reduces the potential for typographical errors.
  - A reduced file size allows efficient downloads.
  - Availability of open standards based editors.
- 17 What is CSS used for?
- Maintaining common formats across multiple web pages within a site.
  - Controlling the HTML and XML standards used with a set domain.
  - Converting pages created in different HTML formats to HTML5.
  - Supporting different image formats for web browser optimisation.
- 18 Why is JavaScript typically used?
- To ensure that HTML5 is backward compatible.
  - To provide a more secure connection using SSL.
  - To offer server side control of the local webpage.
  - To add client side coding to a markup language.

- 19 Why is a website certificate used?
- To prove that the website security is legitimate.
  - To prove that the domain is registered with Nominet.
  - To prove that the company owning the site is legal.
  - To prove that the IPv6 address has no conflicts.
- 20 Which one of the following is created to enable Secure Sockets Layer (SSL)?
- A certificate.
  - A DNS entry.
  - A bitlocker.
  - A cryptopass.

**NOW GO BACK AND CHECK YOUR WORK**

- **IMPORTANT -**  
Are the details at the top of the answer sheet correct?
