Assignment guide for Candidates
Assignment B
About City & Guilds
City & Guilds is the UK’s leading provider of vocational qualifications, offering over 500 awards across a wide range of industries, and progressing from entry level to the highest levels of professional achievement. With over 8500 centres in 100 countries, City & Guilds is recognised by employers worldwide for providing qualifications that offer proof of the skills they need to get the job done.

City & Guilds Group
The City & Guilds Group includes City & Guilds, ILM (the Institute of Leadership & Management) which provides management qualifications, learning materials and membership services, NPTC which offers land-based qualifications and membership services, and HAB (the Hospitality Awarding Body). City & Guilds also manages the Engineering Council Examinations on behalf of the Engineering Council.

Equal opportunities
City & Guilds fully supports the principle of equal opportunities and we are committed to satisfying this principle in all our activities and published material. A copy of our equal opportunities policy statement is available on the City & Guilds website.

Copyright
The content of this document is, unless otherwise indicated, © The City and Guilds of London Institute 2007 and may not be copied, reproduced or distributed without prior written consent.

However, approved City & Guilds centres and learners studying for City & Guilds qualifications may photocopy this document free of charge and/or include a locked PDF version of it on centre intranets on the following conditions:

- centre staff may copy the material only for the purpose of teaching learners working towards a City & Guilds qualification, or for internal administration purposes
- learners may copy the material only for their own use when working towards a City & Guilds qualification

The Standard Copying Conditions on the City & Guilds website also apply.

Please note: National Occupational Standards are not © The City and Guilds of London Institute. Please check the conditions upon which they may be copied with the relevant Sector Skills Council.

Publications
City & Guilds publications are available on the City & Guilds website or from our Publications Sales department at the address below or by telephoning +44 (0)20 7294 2850 or faxing +44 (0)20 7294 3387.

Every effort has been made to ensure that the information contained in this publication is true and correct at the time of going to press. However, City & Guilds’ products and services are subject to continuous development and improvement and the right is reserved to change products and services from time to time. City & Guilds cannot accept liability for loss or damage arising from the use of information in this publication.

About this document
This assignment comprises part of the assessment for Level 3 Develop software using C# (7266/7267-308).

Health and safety
You are asked to consider the importance of safe working practices at all times.

You are responsible for maintaining the safety of others as well as your own. Anyone behaving in an unsafe fashion will be stopped and a suitable warning given. You will not be allowed to continue with an assignment if you compromise any of the Health and Safety requirements. This may seem rather strict but, apart from the potentially unpleasant consequences, you must acquire the habits required for the workplace.

Time allowance
The recommended time allowance for this assignment is 4 hours.
Candiates are advised to read all instructions carefully before starting work and to check with your assessor, if necessary, to ensure that you have fully understood what is required.

Time allowance: 4 hours

Assignment set up: A scenario is provided for candidates in the form of a company specification for a service they require.

This assignment is made up of two tasks

- Task A - Design and create software from a given design specification
- Task B - Test and document the software

Scenario

You work as a programmer for Hammond Design who develop software for clients. You have been asked to design, create and test the software to access an external database. The interface to the database must enable the user to do the following:

- display individual records
- add a new record
- delete a record
- edit a record
- update a record
- print all records
- cancel amendments for a record.

A database already exists named Travel containing a table tblHoliday which contains holiday details. The table tblHoliday contains the following fields:

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Data Type</th>
<th>Field Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>HolidayNo (Primary Key)</td>
<td>Numeric</td>
<td></td>
</tr>
<tr>
<td>Destination</td>
<td>Text</td>
<td></td>
</tr>
<tr>
<td>Cost</td>
<td>Currency, 2 decimal places</td>
<td></td>
</tr>
<tr>
<td>DepartureDate</td>
<td>Date</td>
<td>dd/mm/yyyy</td>
</tr>
<tr>
<td>NoOfDays</td>
<td>Numeric</td>
<td></td>
</tr>
<tr>
<td>Available</td>
<td>Logical (Yes/No)</td>
<td>1</td>
</tr>
</tbody>
</table>

The HolidayNo field is a primary key and there cannot be duplicate entries in this field and a zero-length entry is not allowed.
Task A

In this task you are required to design and create software to access an external database (Travel) with a single table via a database connection and a data form.

Copy the database file(s) that you have been given into the same directory as your project. Make a backup copy of the file(s) in another directory.

1. Save the project at regular intervals as you work through the task. Save the form file as frmHoliday and the Project as HolidayDatabase.

2. Create a data form that shows a single record to appear similar to the form shown above and includes:
   - a label for the heading ‘Downton Travel’ in bold with a different font, a larger font size and in a dark green colour
   - six controls and associated labels to display the data for the record
   - controls to move to the first, previous, next and last record
   - a control to hold a record count in the form n of nn
   - six buttons for Update, Add, Delete, Print, Cancel and Exit
   - setting the background to a suitable colour
   - a control with a suitable image inserted
   - the data input controls receiving focus in an appropriate order.

3. Set the Text property of the form frmHoliday to:
   Task A your name and today’s date

4. Make a connection to the database Travel using suitable parameters.

5. Make sure that the formats of the displayed fields are as shown in frmHoliday.
Set up the program so that when the form frmHoliday is loaded the dataset is loaded automatically and the data for the first record is displayed in the controls.

Write code for the Update, Add, Delete and Cancel buttons.

Write code for the controls to move to the first, previous, next and last records.

Write code in a function to display the total record count and current record number each time one of the navigation buttons is used. This will be displayed in the text box associated with the navigation buttons as shown on the form frmHoliday.

Insert the code required to handle errors for database access which prevents run-time errors.

Write code for the Exit button to terminate the program.

Write code to validate the HolidayNo field. This should be in the range 200 to 1000 (inclusive). Output the following error message if the value is not within the range 200 to 1000.

1: Holiday number must be in range 200 to 1000.

Write code for the Print button to print out all the records in the database with the fields HolidayNo, Destination, Departure Date, Cost, Available with a layout similar to that shown below where 9 indicates a digit and X indicates an alphanumeric character. Note the field Available should be printed as either Yes or No.

<table>
<thead>
<tr>
<th>Holiday No</th>
<th>Destination</th>
<th>Departure Date</th>
<th>Cost</th>
<th>Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>9999</td>
<td>XXXXXXXXXXXXXXXXXXXXX</td>
<td>99/99/99</td>
<td>£999.99</td>
<td>XXX</td>
</tr>
<tr>
<td>9999</td>
<td>XXXXXXXXXXXXXXXXXXXXX</td>
<td>99/99/99</td>
<td>£999.99</td>
<td>XXX</td>
</tr>
<tr>
<td>9999</td>
<td>XXXXXXXXXXXXXXXXXXXXX</td>
<td>99/99/99</td>
<td>£999.99</td>
<td>XXX</td>
</tr>
<tr>
<td>9999</td>
<td>XXXXXXXXXXXXXXXXXXXXX</td>
<td>99/99/99</td>
<td>£999.99</td>
<td>XXX</td>
</tr>
</tbody>
</table>

Task B

In this task you are required to test and document the software created.

1 Create test data to test the Update, Add, Delete, Print and Cancel buttons on the frmHoliday form.

2 Prepare a test plan, test the software, compare the actual results to the expected results keeping a log for each test which identifies any discrepancies between actual and expected results and records any amendments to correct errors.

3 Locate the EXE file and run the executable file to demonstrate the software.

4 Produce end user documentation to show how to use the software.
Print a program listing and a screen print of the form frmHoliday.

Candidates should check that the program produced meets the following requirements:

6. The program must conform to the design specification.

7. The program uses the most appropriate controls and events.

8. Meaningful names are used for constants, variables, objects, forms and controls using consistent naming convention.

**Note**

- Candidates should produce the following for their Assessor.
  - A printed program listing.
  - Screen print of the form frmHoliday.
  - Test data, test plan, expected results, actual results (including printed output), test output and log of testing.
  - End user documentation.
- Ensure that your name is on all documentation.
- If the assignment is taken over more than one period, all paperwork must be returned to the test supervisor at the end of each sitting.
