Version 1.1
About City & Guilds
City & Guilds is the UK’s leading provider of vocational qualifications, offering over 500 awards across a wide range of industries, and progressing from entry level to the highest levels of professional achievement. With over 8500 centres in 100 countries, City & Guilds is recognised by employers worldwide for providing qualifications that offer proof of the skills they need to get the job done.

City & Guilds Group
The City & Guilds Group includes City & Guilds, ILM (the Institute of Leadership & Management) which provides management qualifications, learning materials and membership services, NPTC which offers land-based qualifications and membership services, and HAB (the Hospitality Awarding Body). City & Guilds also manages the Engineering Council Examinations on behalf of the Engineering Council.

Equal opportunities
City & Guilds fully supports the principle of equal opportunities and we are committed to satisfying this principle in all our activities and published material. A copy of our equal opportunities policy statement is available on the City & Guilds website.

About this document
This assignment comprises all of the assessment for Level 3 Testing ICT systems 3 (7266/7267-505/7540-321).

Health and safety
You are asked to consider the importance of safe working practices at all times.

You are responsible for maintaining the safety of others as well as your own. Anyone behaving in an unsafe fashion will be stopped and a suitable warning given. You will not be allowed to continue with an assignment if you compromise any of the Health and Safety requirements. This may seem rather strict but, apart from the potentially unpleasant consequences, you must acquire the habits required for the workplace.

Time allowance
The recommended time allowance for this assignment is 5 hours.
Time allowance: 5 hours

Assignment set up:

This assignment is made up of three tasks

- Task A – Gather system information and design a test plan
- Task B – Carry out a planned test schedule
- Task C – Compile a test report

Scenario

You have recently been offered the post of ICT system support supervisor for a 24-hour customer call centre – part of a mail order company. The call centre manager has expressed concern over the frequency of system failures and the general overall slow performance of the system at certain times.

Your first task in your new post will be to design a comprehensive test plan to evaluate the system integrity and performance, and to identify problem areas. You will then be tasked with implementing the test plan and drawing conclusions from the results.

The call centre is staffed by 150 helpdesk operators, working in three 8-hour shifts, 6 days a week, with a break from 2000 hrs Saturday to 0600 Monday. In addition to 55 helpdesk terminals, there are a further 20 administrative and managerial workstations, which are in use 5 days a week, Mon – Fri 0900-1700. Your Assessor will provide further technical details – the only details available about the system are those that have been supplied by your Assessor.
Task A – Gather system information and design a test plan

1. Using the details given in the scenario and the technical specification provided by your Assessor, devise a comprehensive test plan for the complete system. The plan should take into account

   • the system, or relevant parts of it, must remain operational during the working times stated in the scenario – you must maintain a minimum of 45 operational helpdesk terminals
   • all data within the system must remain live, accessible and secure at all times, although it may be copied. Copies must also remain secure at all times
   • any customer access to the product database via the Internet may be taken off-line for a maximum of one hour at a time, maximum twice in any 24 hours
   • no more than five administrative and managerial workstations to be off-line during their working hours
   • you will be permitted to call in assistance for software application testing only.

   The plan must cover all major operational aspects of the system and should include six tests and six monitoring operations. Plan details should include

   • aims of the test programme
   • tests required and reasons for each – differentiate between whole system and system component tests
   • tests that address functionality, capacity and security
   • tests that could affect data security and measures to avoid problems
   • diagnostic software and hardware required
   • time allocations for each test including reasons why a particular day/time has been selected
     • a graphical representation of the test plan (e.g. a Gantt chart) timed to begin one week after the date of this assignment
   • additional technical assistance required.

Task B – Carry out a planned test schedule

Your Assessor will supply you with a typical ICT workstation. This represents one of the administration workstations referred to in Task A.

Q1. Write down, on the written answer sheet, three questions you would ask the end user in order to gain extra information.

1. Discuss your questions with your Assessor and record any additional information gained from your discussion.

2. Carry out a system evaluation and record details on the System Evaluation Form. Identify system hardware and software configuration settings and record the details on the System Configuration Form.
3 Select appropriate hardware and software tests from the plan devised in Task A. Record them in the test column on the System Test Report.

4 Note any applicable tests that may affect existing data in the workstation and the measures to be taken to prevent loss or corruption of data. Record these on the Test Report.

5 Take appropriate actions to safeguard any data contained on the workstation.

6 Using the software tools detailed on the test plan, implement the test plan and record the results.

7 Note on the test plan any test results that are outside the normal expected range.

**Task C – Compile a test report**

1 Using the data collected in Tasks A and B, compile a short test report detailing

   - any faults found during the tests
   - recommended repair action and/or action carried out to allow the tests to continue
   - actual system performance compared with expected performance
   - two recommended upgrade/modification options to improve performance.

Q2 Write down on the answer sheet the purpose and function of the following types of software.

   a) Burn-in.
   b) Stress test.

When you have finished working:

   - Sign each document above your name and label all removable storage media with your name.
   - Hand all paperwork and removable storage media to your assessor.

If the assignment is taken over more than one period, all paperwork and removable media must be returned to the test supervisor at the end of each sitting.

**End of assignment**
