

General guidance for candidates

General guidance

This is a formal assessment that you will be marked and graded on. You will be marked on the quality and accuracy of your practical performance and any written work you produce. It is therefore important that you carry your work out to the highest standard you can. You should show how well you know and understand the subject and how you are able to use

This is an assessment of your abilities, so the work must be all your own work and carried out under the conditions stated. You will be asked to sign a declaration that you have that any outside help with the assessment.

necessary, but they will record any other guidance you need and this will the taken into account during marking.

Plagiarism is the failure to acknowledge sources properly and/or the submission of another person's work as if it were your own. Plagiarism is not allowed in the assignment.

Where research is allowed, your tutor must be able to identify which work you have done yourself, and what you have found from other sources. It is therefore important to make sure you acknowledge all sources and clearly reference any mation taken from them.

Timings and planning

Where you have to plan your time, you should tak e care to make sure you have divided the time available between tasks appropriately. It some assignments, there are specified timings which cannot be changed and which need to be taken into account. You should utor. check your plan is appropriate with your

If you have a good reason for needing more time, you will need to explain the reasons to your tutor and agree a new deadine date. Changes to dates will be at the discretion of the tutor, and they may not mark work that is handed in after the agreed deadlines.

Health and Safety

safely, in particular while you are carrying out practical tasks. You must alwavs

follow any relevant Health and Safety regulations and codes of practice. You must alwa

If your tutor sees you working in a way that is unsafe for yourself or others, they will ask you diately, and tell you why. Your tutor will not be able to reassess you until they to stop in ou are ready for assessment and can work safely. are s

Nesentation of work

Presentation of work must be neat and appropriate to the task.

You should make sure that each piece of evidence including any proformas eg record/job cards are clearly labelled with your name and the assignment reference.

All electronic files must be given a clear file name that allows your tutor to identify it as your work.

Written work eg reports may be word processed but this is not a requirement.

Assignment Brief

You are an engineer employed by a small company that manufactures materials handling equipment.

The company is looking to develop a pick and place unit for a customer. The unit **must** be able to:

customer has specified that that the pick and place unit cheets runs over the lifting area and encoded The customer has specified that that the pick and place unit should use a beam of that runs over the lifting area and spans the full length of the lift, to which the lift mechanism is connected in some way. The parameters of the cube and the direments of the movement are given in the design criteria below.

You have been asked to design, build and test a prototype for the place unit.

If the outcome of the research and development satisfies the c stomer's requirements, it is anticipated that an order will be received for at least 1200 pick and place units.

Design Criteria

These basic requirements for the design of the pix and place unit are:

- the unit must move a cube is of nominal ensions 50 x 50 x 50 mm with a mass of up to 1 ka
- the cube will be located within a pick up area that is 55 mm wide and 200 mm long, running in the direction of the required movement
- system to detect the location of the cube within the pickthe unit must include a sense up area
- the cube must be raised Vertically at least 10 mm up from the surface, prior to the horizontal movement
- the cube must more in a straight line to a designated drop-off area 100 x 100 mm wide, from the nearest end of the pick-up area, and lower it into the area located 500 mm
- use a beam that runs over the lifting area and spans the full length of the the unit she
- electrically powered
- fould be no wiring exposed externally
- unit must be controlled by a programmable controller.

Tasks

Task 1

The Mechanical Assembly

Produce a design for the pick and place unit, to include:

- a) a design specification using the design criteria for the pick and place unit
- b) an evaluation of suitable designs for the pick and place unit encompassing:
 - sensor options
- construction materials.
 c) a description of your chosen design, including 3D CAD model and working drawith details of the following as a minimum:

 all mechanical assemblies including materials
 mechanical design calculations for

 loading on the main structure drawings

FSMENT

4

- - o any gearing arrangements and mechanicate
- d) components required, differentiating between
 - those that are available
 - those that need to be specially manufacture

Conditions of assessment:

You must carry out the task on your own, upervised conditions.

What you must produce for marking

- design specification
- evaluation of design options and materials
- working drawings
- .nit all mechanical calculations.

Task 2

The Electrical Assembly

Design and test a prototype for the sensor circuit to detect when an item is placed in the pick-up area:

- b) simulate the operation of the design using a Computer Aided Design (CAD) package
 c) complete a risk assessment for the construction of a soldered prototype circuit
 d) build a soldered prototype working circuit from your design
 e) test the operation of the participation of the participation.
- JSF-FORLUVE

- e) test the operation of the prototype design.

Conditions of assessment:

You must carry out the task on your own, under supervised conditions.

What you must produce for marking:

- circuit diagram •
- simulation results
- risk assessment
- prototype of soldered circuit
- summary of results of testing.

Additional evidence of your performance that nust be captured for marking:

photographs of the soldered circu uit taken by you and/or your tutor.

Task 3

king mechanical prototype of your pick and place unit. You are required to construct You must:

- tement for one of the manufacturing processes used for the a) complete a method prototype
- prototype of your pick and place unit including all mechanical b) build a worki and fasteners
- prototype functions as intended.

Conditions of assessment:

carry out the task on your own, under supervised conditions.

fat must be produced for marking:

- a method statement
- a working prototype
- a record of the testing carried out.

Additional evidence of your performance that must be captured for marking:

- photographs or video clips of the functioning prototype taken by you and/or your tutor
- photographs, video clips and/or tutor's notes of your working methods and guality of • outputs.

Task 4

In anticipation of the potential manufacture of 1200 pick and place units, you **must** produce:

- a detailed evaluation of the product design.
- PASTASSIGNMENT 12019-DONOTUSEFOR WEASSISSMENT

Task instructions for centres

Resources

Candidates **must** have access to a suitable range of resources to carry out the tasks includina:

- internet access for research for: design ideas, costs, component data and production
- access to appropriate ICT software access to CAD software suitable for 3D modelling ie Solidworks, Autodesk Invento Creo, Sketchup or similar access to CAD software suitable for circuit design and simulation manufacturer's datasheets (for electronic components) scientific calculator for design calculations .

- graph paper •
- tools for the electronic assembly, for example: soldering iron, side cutters, snipe nose pliers, wire strippers, stripboard cutter (if used), PCB/stripboard holder, solder extraction units (portable or fixed)
- DC power supply unit
- basic electronic components including; capacitors, resistors, sensor components, integrated and discrete components, wiring and vininal pins
- PCB for sensor circuit prototype
- materials to develop the prototype mode .
- a range of nuts, washers and bolt faste
- a range of hand tools for mechanical ufacture
- access to a range of mechanical engineering facilities including lathes, milling machines, pillar drills and welding equipment (as required)
- a camera (video/still) for recording prototype function
- programmable system software and hardware upload facilities.

Time

The recommended time all cated for the completion of the tasks and production of evidence approximately **30** hours. Candidates should be required to plan their for this assessment is work and have the ans confirmed for appropriateness in relation to the time allocated for each task.

nded that centres allocate the time as follows: It is reco

- 9 hours
- ask 2 5 hours
- Task 3 12 hours
- Task 4 4 hours

Centre guidance

Guidance provided in this document supports the administration of this assignment. The following documents available on the City & Guilds website provide essential generic guidance for centres delivering Technical gualifications and **must** be referred to alongside this guidance:

- Technical qualifications marking
- Technical gualifications moderation (updated annually) •
- Technical gualifications teaching, learning and assessment

SSMENT This synoptic assessment is designed to require the candidate to make use their knowle understanding and skills they have built up over the course of their learning to tack problems/tasks/challenges.

This approach to assessment emphasises to candidates the importance and applicability of the full range of their learning to practice in their industry area, and support them in learning to take responsibility for transferring their knowledge, understanding and skills to the practical situation, fostering independence, autonomy and confidence

Candidates are provided with an assignment brief. They then ha to draw on their knowledge and skills and independently select the correct proc sees, skills, materials, and approaches to take to provide the evidence specified by the blef.

During the learning programme, it is expected that tuto where taken the opportunity to set shorter, formative tasks that allow candidates to be supported to independently use the learning they have so far covered, drawing this together in a similar way, so they are familiar with the format, conditions and expectations of the synoptic assessment.

Candidates should be made aware during learning what the Assessment Objectives are and how they are implemented in marking the assignment, so they will understand the level of performance that will achieve them high larks.

Candidates should not be entered for the assessment until the end of the course of learning for the qualification so they are position to complete the assignment successfully.

Health and safety

Candidates should not be entered for assessment without being clear of the importance of working safely, and pactice of doing so. The tutor must immediately stop an assessment if a candidate work sineafely. At the discretion of the tutor, depending on the severity of the incident, the saudidate may be given a warning. If they continue to work unsafely however, ht must be ended and they must retake the assessment at a later date. their asse

Dance with timings

be timings provided are estimates to support centre planning. They refer to assessment time, not any additional setting up the centre needs to carry out to create the required to ensure an appropriate assessment environment.

It is the centre's responsibility to plan sufficient assessment sessions, under the appropriate conditions, within the assignment window, to allow candidates reasonable time to complete the assessment tasks.

Where candidates are required to plan their work they should have their plans confirmed for appropriateness in relation to the time allocated for each task.

Candidates should be allowed sufficient time to fully demonstrate the range of their skills, however this also needs to be reasonable and practicable. Candidates should be allowed to overrun their planned timings or professional service times (where they exist) in order for evidence of a range of their skills to be captured. If however, the time required exceeds reasonably set assessment periods, or the tolerance suggested for professional service times, the centre may stop the assessment and base the marking on the evidence up to that point, including the tutor's notes of how far over time the task has taken.

Where the tutor is required to carry out observation of performance, detailed, descriptive S notes must be recorded on the practical observation (PO) form provided. The control flexibility to adapt the form, to suit local requirements (control) evidence collected.

The number of candidates a tutor will be able to observe at one time will pending on:

- the complexity of evidence collection for the task
- local conditions eq layout of the assessment environment.
- amount of additional support available (eg to capture • rideo evidence), adi staggered starts etc,
- of evidence to collect that will whether there are any peak times where there is • need additional support or any that are quieter.

It is advisable to trial the planned arrangements where possible during formative assessment, reviewing the quality of evidence captured and manageability. It is expected that for straight forward observations, (and creases otherwise specified) no more than eight candidates will be observed by a single track at one time, and the number will usually be fewer than this maximum. The key factor consider is the logistics of collecting sufficient evidence.

As far as possible, candidates signid not be distracted, or their performance affected by the process of observation and evidence collection.

Observation notes form partor the candidate's evidence and must describe how well the activity has been carried out, rather than stating the steps/ actions the candidate has taken. The notes must be very descriptive and focus on the quality of the performance in such a way that comparisons between performances can be made. They must provide sufficient, appropriate evidence that can be used by the marker (and moderator) to mark the performance sing the marking grid.

Identifying that it is about the performances that is different between candidates can clarify the qualities that are important to record. Each candidate is likely to carry out the same steps, so a checklist of this information would not help differentiate between them. Wer qualitative comments on how well they do it, and quantitative records of accuracy and tolerances would.

The tutor should refer to the marking grid to ensure appropriate aspects of performance are recorded. These notes will be used for marking and moderation purposes and so must be detailed, accurate and differentiating.

Tutors should ensure that any required additional supporting evidence including photographs or video can be easily matched to the correct candidate, are clear, well-lit and showing the areas of particular interest in sufficient detail and clarity for assessment (ie taken at appropriate points in production, showing accuracy of measurements where appropriate).

If candidates are required to work as a team, each candidate's contribution must be noted separately. The tutor may intervene if any individual candidate's contribution is unclear or to ensure fair access (see below).

The **Technical qualifications guides on marking and moderation** are essential guidance documents and are available on the City & Guilds website. These provide further information on preparing for assessment, evidence gathering, standardisation, marking and moderation, SSMEN and must be referred to when planning and carrying out assessment.

Minimum evidence requirements for marking and moderation

The sections in the assignment:

- What you must produce for marking, and
- Additional evidence of your performance that must be captured for ma

list the minimum requirements of evidence to be submitted for marking and the formation sample.

Evidence produced during assessment above and beyond this may be supplitted, as long as it provides useful information for marking and moderation and has been boduced under appropriate conditions.

While technological methods which support the capturing or creating of evidence can be helpful, eg pinboard style websites for creating mood boards the final evidence must be converted to a suitable format for marking and moderation, which cannot be lost/ deleted or amended after the end of the assessment period (eg screen prints, pdf files). Considerations around tracking authenticity and potential loss of materian osted on such platforms during assessment is the centre's responsibility.

Where candidates have carried out some work as a group, the contribution of each candidate must be clear. It is not appropriate to submit identical information for each candidate without some way for the marker and moderator to mark the candidates individually.

Note: Combining candidates' individual pieces of evidence into single files or zip files may make evidence management during internal marking more efficient and will greatly simplify the uploading of the moderation anple.

Where the minimum requirements have not been submitted for the moderation sample by the final moderation deadline, or the quality of evidence is insufficient to make a judgement, the moderation, and therefore any subsequent adjustment, will be based on the evidence that has been submitted. Where this is insufficient to provide a mark on moderation, a mark of zero may be given.

Preparation candidates

Candidate should be aware of which aspects of their performance (across the AOs) will give then good marks in assessment. This is best carried out through routinely pointing out good or poor performance during the learning period, and through formative assessment.

During the learning programme, direct tutor instruction in how to tackle practical tasks through modelling, support, guidance and feedback are critical. However gradual removal of this support is necessary in preparation for summative assessment. This, supported approach is not valid for summative assessment.

The purpose of summative assessment is to confirm the standard the candidate has reached as a result of participating in the learning process. Candidates should be encouraged to do the best they can and be made aware of the difference between these summative assessments and any formative assessments they have been subject to. Candidates may not have access to the full marking grids, as these may be misinterpreted as pass, merit or distinction descriptors. Refer to the *Technical qualifications – teaching, learning and assessment* centre guidance document, available on the City & Guilds website for further information on preparing candidates for Technical qualification assessment.

Guidance on assessment conditions

The assessment conditions that are in place for this synoptic assignment are to:

- ensure the rigour of the assessment process
- provide fairness for candidates
- give confidence in the outcome.

They can be thought of as the rules that ensure that all candidates who take an essessment are being treated fairly, equally and in a manner that ensures their result reflects their true ability.

SSMEN

The conditions outlined below relate to this summative synoptic assignment. These do not affect any formative assessment work that takes place, although it is advised that candidates are prepared for the conditions they will need to work under during summative assessment.

The evidence for the tasks that make up this synoptic assignment must be completed under the specified conditions. This is to ensure authenticity and prevent malpractice as well as to assess and record candidate performance for assessment in the practical tasks. Any aspect that may be undertaken in unsupervised conditions is specified. It is the centre's responsibility to ensure that local administration and oversight gives the tutor sufficient confidence to be able to confirm the authenticity of the candidate's work.

Security and authentication of candidate work

Candidate evidence must be kept secure to prevent unsupervised access by the candidate or others. Where evidence is produced over a number of sessions, the tutor must ensure learners and others cannot access the evidence without supervision. This might include storing written work or artefacts in ocked cupboards and collecting memory sticks of evidence produced electronically at the end of each session.

Candidates are required or sign declarations of authenticity, as is the tutor. The relevant form is included in this assignment pack and must be signed after the production of all evidence.

Where the canceled or tutor is unable to, or does not confirm authenticity through signing the declaration form, the work will not be accepted at moderation and a mark of zero will be given. If any question of authenticity arises eg at moderation, the centre may be contacted for justification of authentication.

Sibility and fairness

Where a candidate has special requirements, tutors should refer to the Access arrangements and reasonable adjustments section of the City & Guilds website.

Tutors can support access where necessary by providing clarification to **any** candidate on the requirements or timings of any aspect of this synoptic assignment. Tutors should **not** provide more guidance than the candidate needs as this may impact on the candidate's grade, see the guidance and feedback section below.

All candidates must be provided with an environment, time frame and resources that allows them reasonable access to the full range of marks available.

Where candidates have worked in groups to complete one or more tasks for this synoptic assessment, the tutor must ensure that no candidate is disadvantaged as a result of the performance of any other team member. If a team member is distracting or preventing another team member from fully demonstrating their skills or knowledge, the tutor must intervene.

Guidance and feedback

To support centre file management, tutors may specify a suitable file format and referencing format for evidence (unless otherwise specified eg if file naming is an assessment point for the assignment). Guidance must only support access to the assignment and must not provide feedback for improvement. The level and frequency of clarification & guidance be

- recorded fully on the candidate record form (CRF),
- taken into account along with the candidate's final evidence during maning
- made available for moderation.

Tutors **must not** provide feedback on the quality of the performance **by** bow the quality of evidence can be improved. This would be classed as malpractice

Tutors **should** however provide general reminders to candidates throughout the assessment period to check their work thoroughly before submitting it, and to be sure that they are happy with their final evidence as it may not be worked on further after submission.

Candidates can rework any evidence that has been produced for this synoptic assignment during the time allowed. However, this must be as a result of their own review and identification of weaknesses and not as a result of totor feedback. Once the evidence has been submitted for assessment, no further amenements to evidence can be made.

Tutors **should** check and be aware of the candidates' plans and designs to ensure management of time and resources is appropriate, and so any allowed intervention can take place at an appropriate time.

Tutors **should** ensure that candidates' plans for completion of the tasks distribute the time available appropriately and may guide candidates on where they should be up to at any point in a general way. Any excessive time taken for any task should be recorded and should be taken into account during marking if appropriate.

It is up to the market to decide if the guidance the candidate has required suggests they are lacking in any AQ, the severity of the issue, and how to award marks on the basis of this full range of evidence has had an impact on where and how guidance has had an impact on the marks given so this is available should queries arise at moderation or appeal.

What is not, an appropriate level of guidance

A tutor **should intervene with caution** if a candidate has taken a course of action that will result in them not being able to submit the full range of evidence for assessment. However, this should **only** take place once the tutor has prompted the candidate to check that they have covered all the requirements. Where the tutor has to be explicit as to what the issue is, this is likely to demonstrate a lack of understanding on the part of the candidate rather than a simple error, and full details should be recorded on the CRF.

• The tutor **should not** provide guidance if the candidate is thought to be able to correct the issue without it, and a prompt would suffice. In other words, only the minimum support the candidate actually needs should be given, since the more tutor

guidance provided, the less of the candidate's own performance is being demonstrated and therefore the larger the impact on the marks awarded.

- A tutor **must not** provide guidance that the candidate's work is not at the required standard or how to improve their work. In this way, candidates are given the chance to identify and correct any errors on their own, providing valid evidence of knowledge and skills that will be credited during marking.
- The tutor must not produce any templates, pro-formas, work logs etc unless instructed to in the assignment guidance. Where instructed to do so, these materials must be produced as specified and contain no additional guidance. Templates provided as part of the assignment should be used as provided, and not adapted.

All specific prompts and details of the nature of any further guidance must be recorded the relevant form and reviewed during marking and moderation.

Guidance on marking

Please refer to the **Technical qualifications** – **marking,** and - **moderation** centre guidance documents for further information on gathering evidence suitable for marking and moderation, and on using the marking grid and forms.

The candidate record form (CRF) is used to record:

- Details of any guidance or the level of prompting the andidate has received during the assessment period
- Rough notes bringing together relevant evidence from across tasks during marking.
- Summary justifications when holistically coming to an overall judgement of the mark.

The practical observation form (PO) is used to record:

• Descriptive information and evidence of candidate performance during an observation. Although descriptions of the quality of performance should support decisions against the AOs, the notes should follow the flow of the observation, rather than attempting to assigned udence against the AOs at this point.

Guidance on marking

Please see the **Technical qualifications – marking and moderation** centre guidance document for further information on gathering evidence suitable for marking and moderation, and on using the obwing marking grid.

The Candicate Record Form (CRF) is used to record:

- The assessment period
- rough notes made while reviewing the evidence alternatively these may be captured on the marking and moderation platform
- summary justifications when holistically coming to an overall judgement of the mark.

Marking grid

%	Assessment Objective	Band 1 descriptor	Band 2 descriptor	SGFSSMENT Band 3 descriptor
		Poor to limited	Fair to good	Strong to excellent
20	 AO1 Recall of knowledge relating to the qualification LOs Does the candidate seem to have the full breadth and depth of taught knowledge across the qualification to hand? How accurate it their knowledge? Are there any gaps or misunderstandings evident? How confident and secure does their knowledge seem? 	(1-4 marks) Recall shows some weaknesses in breadth and/or accuracy. Hesitant, gaps, inaccuracy.	(5-8 marks) Recall is generally accurate and shows reasonable breadth. Inaccuracy and misunderstandings are infrequent and usually minor. Sound, minimal gaps.	(9-12 marks) Consistently strong evidence of accurate and confident recall from the breadth of knowledge. Accurate, confident, complete, fluent, slick.
		identification of mechanical and en electrical theory, PLC theory, man	e expected: mechanical and electro lectronic component parts, technolo nufacturing operations, CAD system tion theory, product planning terms,	gical terms, mechanical and operations, innovation theory,
		Candidate has shown basic knowledge from across the qualification, with some insecurity in some areas. Examples provided cover a limited range.	Candidate has shown a good range of knowledge from across the qualification which is sound and often detailed.	Candidate shows in-depth and detailed knowledge across the whole qualification range showing a high degree of confidence and accuracy.

%	Assessment Objective	Band 1 descriptor	Band 2 descriptor	Band 3 descriptor
		Poor to limited	Fair to good	Strong to excellent
20	AO2 Understanding of concepts theories and processes relating to the LOS • Does the candidate make connections and show causal links and explain why? • How well theories and concepts are applied to new situations/the assignment? • How well chosen are exemplars – how well do they illustrate the concept?	(1-4 marks) Some evidence of being able to give explanations of concepts and theories. Explanations appear to be recalled, simplistic or incomplete. Misunderstanding, illogical connections, guessing.	(5-8 marks) Explanations are logical. Showing comprehension and generally free from misunderstanding, but may lack depth or connections are incompletely explored. Logical, slightly disjointed, plausible.	(9-12 marks) Consistently strong evidence of clear causal links in explanation generated by the candidate. Candidate uses concepts and theories confidently in explainin decisions taken and application to new situations. Logical reasoning, thoughtful decisions, causal links, justified.
		Examples of understanding expected: relationship between mechanical interface of equipment design and human use, relationship between mechanical and electronic components, properties and relationships of electronic components, selection of components, parameters for experimentation, properties of materials and components, relationships between programs and physical component movement, manufacturing planning processes, manufacturing processes, waste and recycling processes, structural and design performance characteristics.		
		 Bottom of band: Candidate has shown a basic understanding of some key concepts. Top of band: Candidate has shown basic understanding of concepts from across the qualification. Some points were covered in detail. 	Bottom of band: Candidate has shown understanding of a range of concepts from across the qualification, which were sound and often detailed. Top of band: Candidate has shown a broad range of understanding of concepts, making links to practice. Understanding is consistent with reasoning coherent and well explained.	Bottom of band: Candidate has shown in-depth and detailed understanding of concepts across the whole qualification range, showing a high degree of confidence and accuracy. Top of band: Candidate explanations are clear and strong links have been made between concepts and links to practice. Concepts and understanding were applied consistently and effectively with recommendations.

%	Assessment Objective	Band 1 descriptor	Band 2 descriptor	Band 3 descriptor
		Poor to limited	Fair to good	Strong to excellent
20	AO3 Application of practical/ technical skills - How practiced/fluid does hand eye coordination and dexterity seem? - How confidently does the candidate use the breadth of practical skills open to them? - How accurately/ successfully has the candidate been able to use skills/achieve practical outcomes? -31-033 Level Schnical Diplome	(1-4 marks) Some evidence of familiarity with practical skills. Some awkwardness in implementation, may show frustration out of inability rather than lack of care. Unable to adapt, frustrated, flaws, out of tolerance, imperfect, clumsy.	(5-8 marks) Generally successful application of skills, although areas of complexity may present a challenge. Skills are not yet second nature. Somewhat successful, some inconsistencies, fairly adept/ capable.	(9-12 marks) Consistently high levels of skill and/or dexterity, showing ability to successfully make adjustments to practice; able to deal successfully with complexity. Dextrous, fluid, comes naturally, skilled practiced.
		Examples of skills expected: degree of accuracy features of mechanical/electrical CAD software used effectively, manual dexterity in prototype building, degree of accuracy in prototype machine operations, optimal accuracy and efficiency in programming, accuracy and functionality of thermal joining, experimentation, measuring, testing, health and safety.		
		Bottom of band: Candidate created outputs some of which were incomplete. May not show full range of skills to complete tasks but was able to work safely at all times. Top of band: Candidate demonstrated basic application of technical skills. Created outputs with limited accuracy and interrelationships. Able to obtain some data from tests and to work safely at all times.	 Bottom of band: Candidate demonstrated application of technical skills to create required outputs which were generally accurate and some interrelationships evident. Able to obtain accurate data from tests and work safely at all times. Demonstrated manual dexterity in the use of equipment and materials. Top of band: Candidate demonstrated application of technical skills when completing tasks with some inconsistency. Outputs were generally accurate and there was a clear relationship between them. Obtained some valid, reliable and accurate data. Technology and software were used effectively. Able to work safely at all times. Demonstrated manual dexterity in the use of equipment and materials and outputs were functional. 	Bottom of band: Candidate demonstrated consistent application of technical skills. Outputs were accurate, functional and finished to a high standard with clear relationships between them. Obtained valid, reliable and accurate data throug appropriate methodologies. Technolog and software were used effectively. Showed a high degree of manual dexterity in the use of equipment and materials. Able to work safely at all times. Top of band: Candidate demonstrated consistent, confident application of technical skills Outputs were accurate, functional and finished to a professional standard wit clear relationships between them. The was effective use of technology and advanced software features. Obtained valid, reliable and accurate data throug appropriate methodologies. Showed a high degree of manual dexterity in the use of equipment and materials. Able work safely at all times.

6 Assessment Objective	Danal 4 alegeninten			
	Band 1 descriptor	Band 2 descriptor	Band 3 descriptor	
	Poor to limited	Fair to good	Strong to excellent	
 AO4 Bringing it all together – coherence of the whole subject Does the candidate draw from the breadth of their knowledge and skills? Does the candidate remember to reflect on theory when solving practical problems? How well can the candidate 	(1-4 marks) Some evidence of consideration of theory when attempting tasks. Tends to attend to single aspects at a time without considering implication of contextual information. Some random trial and error, new situations are challenging, expects guidance, narrow. May need prompting.	(5-8 marks) Shows good application of theory to practice and new context, some inconsistencies. Remembers to apply theory, somewhat successful at achieving fitness for purpose. Some consolidation of theory and practice.	(9-12 marks) Strong evidence of thorough consideration of the context and us of theory and skills to achieve fitne for purpose. Purposeful experimentation, plausible ideas, guided by theory and experience fit for purpose, integrated, uses whole toolkit of theory and skills.	
work out solutions to new contexts/ problems on their own?	Examples of bringing it all together: applying knowledge and understanding across all tasks, justifying reflective recommendations/approaches taken, understanding of mechanical and electronic components in CAD, representation of mechanical and electrical features using CAD, development of effective functional programs, application of understanding of product planning, application of understanding of evaluative reflection and implementation of innovation, application of understanding of mechanical and electronic assemblies, application of understanding of material properties and manufacturing processes for the development of a design.			
	Bottom of band: Candidate presented some evidence of using their knowledge, understanding and skills to make straightforward links between limited topics across the qualification. Top of band: Candidate showed evidence of using their knowledge, understanding and skills to make key links between limited topics across the qualification.	Bottom of band: Candidate consistently brought together their knowledge, understanding and skills when developing the design model. Key links were made between a range of topics from across the qualification. Top of band: Candidate used a range of knowledge, understanding and skills from across the qualification when developing and evaluating the design model. Integration of knowledge, understanding and skills to inform development of design model to commercial manufacture.	Bottom of band: Candidates used a range of knowledg understanding and skills from across the qualification when developing and evaluating the design model. Integrati of knowledge, understanding and skill to inform recommendations for development of design model to commercial manufacture. Top of band: Candidate used a wide range of knowledge, understanding and skills from across the qualification to develo and evaluate the design model. Integration of knowledge, understandi and skills informed justified recommendations for development of design model to commercial manufacture.	

%	Assessment Objective	Band 1 descriptor	Band 2 descriptor	Band 3 descriptor
		Poor to limited	Fair to good	Strong to excellent
20	 AO5 Attending to detail/perfecting Does the candidate routinely check on quality, finish etc and attend to imperfections/ omissions? How much is accuracy a result of persistent care and attention (eg measure twice cut once)? Would you describe the candidate as a perfectionist and wholly engaged in the subject? 	(1-4 marks) Easily distracted or lack of checking. Insufficiently concerned by poor result; little attempt to improve. Gives up too early; focus may be on completion rather than quality of outcome. Careless, imprecise, flawed, uncaring, unfocussed, unobservant, unmotivated.	(5-8 marks) Aims for satisfactory result but may not persist beyond this. Uses feedback methods but perhaps not fully or consistently. Variable/intermittent attention, reasonably conscientious, some imperfections, unremarkable.	(9-12 marks) Alert, focussed on task. Attentive and persistently pursuing excellence. Using feedback to identify problems for correction. Noticing, checking, persistent, perfecting, refining, accurate, focus on quality, precision, refinement, faultless, meticulous.
		Examples of attending to detail: meeting specific requirements of the design task, attention to detail when completing drawings, simulations and assemblies (accuracy, neatness, annotation, orientation of components, structural integrity, finishing), rational consideration of wide production and manufacturing concepts.Candidate showed limited attention to detail. Evidence provided showed inaccuracies orCandidate showed consistent attention to detail. Evidence provided was generally accurateCandidate was highly focused on the task showing care and attention to detail. Minimal errors		
		gaps in assessment tasks.	and related to specific tasks.	were evident.

18

gaps in assessment tasks. and related to s and related to
