## SCHEME OF WORK LEVEL 4 DIPLOMA IN MECHANICAL ENGINEERING

UNIT 401 ENGINEERING MATHEMATICS

## Introduction

This scheme of work is intended to assist the tutor in delivering this unit to engineering students. It includes a considerable number of worked examples as an aide memoire for the tutor, and a number of suggestions for practice problems. However, because the primary aim is to teach the mathematical methods, there is often little engineering context. It is extremely important that, once each mathematical process has been mastered, students should be introduced to contextual engineering problems so that they can have practice in

- Selecting the correct method and
- Working towards a recognisable engineering solution to an engineering problem. This is important in order to maintain students' motivation and focus

## Suggested teaching times

Since each student group is unique, the suggested teaching hours can only be a guide as to how the allotted 60 GLH is divided up. If there is time left on a session then students should fill that time doing realistic problems until they become second nature. Students should appreciate that in engineering, mathematics is an essential and very powerful tool. It is not done for its own sake, but as a means of solving complex engineering problems.

## UNIT 401 ENGINEERING MATHEMATICS

Lesson 1: Working with algebraic functions
Suggested Teaching Time: 8 hours
Learning Outcome: 1. Be able to use algebraic methods to analyse and solve engineering problems

| Topic | Suggested Teaching | Suggested Resources |
| :---: | :---: | :---: |
| AC 1.1 Evaluate basic algebraic functions <br> AC 1.2 Solve engineering problems that are described by algebraic equations and exponential or logarithmic functions | Session 1 (2 hrs): Functions <br> - Explain what is meant by a function and a composite function. <br> - Solve problems involving composite functions. <br> $g \cdot f(x)$ is a composite function and when calculating this type, $f$ is performed first and the result is substituted into g <br> Explain what is meant by an inverse function. <br> Solve problems involving inverse functions. <br> In general the inverse of a function is the reverse of the operation carried out to find $f(x)$ <br> and is written as $\boldsymbol{f}^{-\mathbf{1}}(\boldsymbol{x})$ <br> Given $f(x)=2 x+1$ find $f^{-1}(x)$ <br> Let $y=2 x+1$ change $f(x)$ as $y$ and $f^{-1}(y)=x$ $\begin{gathered} y=2 x+1 \\ x=\frac{y-1}{2} \\ \therefore f^{-1}(x)=\frac{x-1}{4} \end{gathered}$ | Book: <br> Bird. J. O., Higher <br> Engineering Mathematics $7^{\text {th }}$ edition (Routledge 2014) <br> ISBN-13: 978-0415662826 <br> Websites: <br> http://www.mathcentre.ac.uk/ links <br> http://mathworld.wolfram.com ! <br> http://www.mathcentre.ac.uk/ <br> Good free UK-based learning resource for L4/5 maths |

## SCHEME OF WORK LEVEL 4 DIPLOMA IN MECHANICAL ENGINEERING

## UNIT 401 ENGINEERING MATHEMATICS

Lesson 1: Working with algebraic functions
Suggested Teaching Time: 8 hours
Learning Outcome: 1. Be able to use algebraic methods to analyse and solve engineering problems

| Topic | Suggested Teaching | Suggested Resources |
| :---: | :---: | :---: |
|  | Session 2 (2 hrs): Indices <br> Revise the laws of indices. <br> Solve equations involving indices. <br> e.g. $125^{(2 x+1)} \cdot 25^{2 x} \cdot 625^{(3 x+1)}=3125$ |  |
|  | Session 3 (2 hrs): Partial fractions <br> Rules and methods for partial fractions. <br> Solve problems in partial fractions: <br> Three basic types of denominators <br> - Linear factors: $\frac{3}{(x+5)(x-2)}=\frac{A}{(x+5)}+\frac{B}{(x-2)}$ <br> - Quadratic factor that does not factorise: $\frac{(2 x+3)}{(x-4)(x+7)^{2}}=\frac{A}{(x+3)}+\frac{B x+C}{\left(x^{2}+5\right)}$ |  |

Lesson 3: Differential Calculus

## Suggested Teaching Time: 8 hours

Learning Outcome: 3. Be able to use methods of differential and integral calculus to solve engineering problems

| Topic | Suggested Teaching | Suggested Resources |
| :---: | :---: | :---: |
|  | Session 3 (2 hrs): Differentiation of logarithmic and exponential functions <br> Explain differential properties of logarithmic and exponential functions. Differentiate: $\begin{aligned} y=\ln x & \\ y & =\ln 5 x \\ y & =4 \ln 3 x \\ y & =\ln a e^{-3 x} \end{aligned}$ <br> Solve problems involving for example: <br> Discharge of a capacitor: $\quad \boldsymbol{q}=\boldsymbol{Q} \boldsymbol{e}^{\frac{-t}{R C}}$ <br> Tension in belts: $\quad \boldsymbol{T}_{\mathbf{1}}=\boldsymbol{T}_{\mathbf{2}} \boldsymbol{e}^{\boldsymbol{\mu \theta}}$ <br> Growth of current in a capacitive circuit: $i=i\left(1-e^{\frac{-t}{R c}}\right)$ <br> Differentiate: $\begin{aligned} & y=\ln \left(6 x^{3}-5\right) \\ & y=\ln (\sin 3 x) \\ & y=\ln \frac{x+4}{x-3} \end{aligned}$ <br> use $\log \frac{a}{b}=\log a-\log b$ in the third example |  |

## SCHEME OF WORK LEVEL 4 DIPLOMA IN MECHANICAL ENGINEERING

## UNIT 401 ENGINEERING MATHEMATICS

Lesson 3: Differential Calculus

## Suggested Teaching Time: 8 hours

Learning Outcome: 3. Be able to use methods of differential and integral calculus to solve engineering problems

| Topic | Suggested Teaching | Suggested Resources |
| :---: | :---: | :---: |
|  | Session 4 ( $\mathbf{2} \mathrm{hrs}$ ): Differentiation of a function of a function. The chain rule <br> Differentiate $\begin{aligned} & \quad \frac{d y}{d x}=\frac{d y}{d u} \cdot \frac{d u}{d x} \\ & y=\left(4 x^{3}-5\right)^{4} \\ & \text { Let }\left(4 x^{3}-5\right)=u \quad \text { then } \mathrm{y}=\mathrm{u}^{4} \\ & \frac{d u}{d x}=12 x^{2} \text { and } \frac{d y}{d u}=4 u^{3} \\ & \text { then } \\ & \frac{d y}{d x}=\frac{d y}{d u} \cdot \frac{d u}{d x}=4 u^{3} \cdot 12 x^{2} \\ & =48 x^{2}\left(4 x^{3}-5\right)^{3} \end{aligned}$ <br> An easier method is to differentiate the bracket, treating it as $x^{n}$ then differentiate the function inside the bracket. To obtain $\frac{d y}{d x}$ multiply the two results together. Check back to the answer above. <br> Differentiate different types e.g. $\begin{array}{r} y=\sqrt{4 x^{3}+5 x-4} \\ y=\frac{3}{\left(4 t^{3}-7\right)^{5}} \end{array}$ |  |

## SCHEME OF WORK LEVEL 4 DIPLOMA IN MECHANICAL ENGINEERING
