OSCE Code 7457-350 Supporting Anaesthesia 04 (Mini lack) for Unit 312

The following station covers this Unit's practical learning, including the following Assessment Criteria:

This OSCE will be used to assess the awards indicated

Scenario

The veterinary surgeon wants to anaesthetise a dog for dental treatment.

Using the equipment available, select, assemble and attach the most appropriate anaesthetic breathing system for this patient.

Select and prepare the most appropriate endotracheal tube.

As this is the first induction of the day, you will also need to check that the anaesthetic machine is ready for use. Explain to the examiner the checks that you are making.

For this patient you are required to calculate:

a. Tidal volume (15 ml/kg)

b. Minute volume

c. Fresh gas flow per minute

Set the oxygen flowmeter to show the fresh gas flow setting for this patient. The patient has a pre-anaesthetic respiration rate 20 breaths per minute

Show all your workings including units
You will be expected to:

1. Select Mini Lack anaesthetic breathing system
2. Attach to anaesthetic machine
3. Attach scavenging to APL valve
4. Attach scavenging to fluosorber
5. Place fluosorber below level of the patient
6. Breathing system attached correctly to machine and scavenging
7. Select cuffed endotracheal tube
8. Check that the lumen of the endotracheal tube is patent
9. Inflate the cuff and check for leaks
10. Deflate the cuff
11. Open the oxygen cylinder valve (slowly anticlockwise)
12. Check the registered quantity of oxygen on the pressure dial
13. Turn on the oxygen flowmeter control to check smooth function
14. Turn off oxygen flowmeter control
15. Press emergency oxygen flush button
16. Attach 'in-use' label to oxygen cylinder
17. Check the vaporiser percentage dial to ensure it turns easily
18. Check the level of the volatile anaesthetic agent in the vaporiser and take appropriate action
19. Check for leaks in the breathing system
20. Fully open APL valve and leave open
21. Leave anaesthetic machine ready for use (i.e. oxygen should be switched on and anaesthetic breathing system attached).
22. Tidal volume calculation correct
23. Minute volume calculation correct
24. Fresh gas flow calculation correct
25. Correct units of measurement used for final answer
26. Correctly set the Fresh gas flow using the Oxygen flowmeter
